RE: Declaration of SMS Compliance.

Dear Jeremy and Christina,

Pursuant to the release of the EASA MAG 10 requirements for all US based EASA Approved Part 145 Repair Stations.

ComAV Technical Services LLC certifies that our Safety Management System, including Safety Risk Management processes, meets all requirements of 14 CFR Part 5.

Our SMS includes documented SRM processes to identify hazards through employee reporting and data analysis, assessing risks and implementing controls to maintain an acceptable level of safety.

Overview of the SMS components include:

- Safety Policy
- Safety Risk Management (SRM)
- Safety Assurance
- Safety Promotion

Key elements of the Safety Risk Management process are:

- Hazard Identification.
- Risk Assessment.
- Risk Mitigation.
- Monitoring

ComAV's SRM process identifies hazards via a confidential employee reporting system, assesses risks using a likelihood-severity matrix, and mitigates risks through targeted training and procedural updates, with effectiveness monitored through annual safety reviews.

Thank you for your support.

Sincerely,

A handwritten signature in blue ink that reads "Wendy Darms".
